

# Battery Drainers

Poor cell provider coverage - Each cell provider's coverage is different for a given region and race - (vice versa).

If you are at a race and your cell provider's service is weak as shown with the number of bars on the phone, re-attempts to make connections. There really isn't anything you can do to get around this other than maybe turn off your phone or tracking temporarily if you see the battery is depleting fast.

Limited data bandwidth - When this happens you will see pages not loading fully or time outs. This will also drain your battery as your phone re-attempts to transmit and receive data.

clears up once people get further on the course and away from the start congestion.

Poor weather conditions - We suggest supporting family and friends have a backup battery plan if they are going to be at the race site.

Viewing the screen - We suggest supporting family and friends have a backup battery plan if they are going to be at the race site.

## What's Using Your Battery?

applications running on their phones in the background pulling on the phone's resources and its battery.

You can check to see how much each used app is pulling on your battery by looking at your phone's battery usage screen.

Background apps running in the background are also draining your battery.

For more information view the FAQ section in the app. If you are still in need of assistance, feel free to contact us!

We are happy to help!!
